本软件中：

标注单位的数值，为不含单位的原始数据，如 41.123m 的载机海拔 (m) 对应的数值为 41.123；

标注 (DEC) 的数值，为按照协议转化后的十进制数值，如 30° C 对应的报警温度 (DEC) 对应的数值为 300；

标注 (HEX) 的数值，为十六进制数据。

数据包解析

The screenshot shows the 'Data Packet Analysis' interface with three main panes:

- Raw Data:** Displays the raw data frame structure. It includes fields for 'Data Type' (IEF), 'Address' (10E 100 144 121), 'Length' (2337), and 'Checksum' (2206). Below this is a detailed table of data fields from 0 to 44, each with its name, offset, content, starting value, and decimal value.
- Hex Dump:** Shows the raw data as a hex dump, with bytes grouped by 16. It includes column headers for 'Offset', 'Content', 'Starting Value', and 'Decimal Value'.
- ASCII Dump:** Shows the raw data as an ASCII dump, with bytes grouped by 16. It includes column headers for 'Offset', 'Content', 'Starting Value', and 'Decimal Value'.

设备连接

可通过串口、UDP 或 TCP 连接 GCU。

数据显示区

显示软件与 GCU 通信时的收发数据包。

上位机发送数据

在上位机发送数据列表中输入原始数据，点击 69~S-3 字节的“控制命令”并选择所需的命令，点击“生成数据包”，软件会将原始数据转换为上位机发送的完整数据包，并显示在下方的文本框中。

也可在文本框中输入完整的上位机发送数据包，点击“解析数据包”，数据列表中会显示由数据包解析出的原始数据。

点击“发送”，可将文本框中的数据包发送至 GCU。点击“发送空命令”，可发送一条含有空命令的数据包。

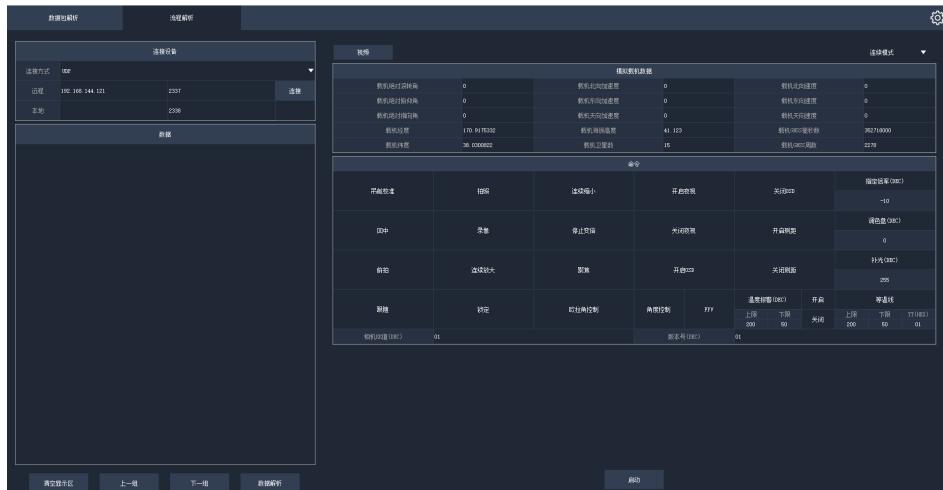

GCU 返回数据

软件收到 GCU 返回的数据包后，会自动解析数据并显示在数据列表中。

也可在下方文本框中输入 GCU 返回的完整数据包并点击“解析数据包”，解析得出的数据会显示在数据列表中。

流程解析

连续模式

点击“启动”，软件会与 GCU 以 30Hz 进行正常通信，可点击各项命令对吊舱进行控制。

单步模式

点击“启动”，软件会与 GCU 以 30Hz 进行正常通信，发送某一命令并收到 GCU 的命令反馈后，软件会再与 GCU 进行两次含有空命令数据包的通信，然后停止通信。

数据解析

点击此按钮，软件会停止与 GCU 的通信，解析数据显示区内高亮标识的一组数据包（含发送数据包与接收数据包），并显示解析结果。可通过点击“上一组”或“下一组”选择需要解析的数据包。

视频

点击“视频”，会弹出视频播放窗口，可在此界面进行与画面交互的操作。

URL：

输入吊舱视频流地址，点击“播放”，窗口显示吊舱实时画面。

画中画切换：

点击此按钮以循环切换吊舱的画中画模式。

指点平移坐标生成：

点击此按钮后，在画面上单击目标，在下方会显示所选点在画面中的坐标。点击“发送”，软件将发送以此坐标为参数的指点平移命令。

指点测温坐标生成：

点击此按钮后，在画面上单击目标，在下方会显示所选点在画面中的坐标。点击“发送”，软件将发送以此坐标为参数的指点测温命令。点击“命令退出”以发送关闭指点测温的命令。

跟踪坐标生成：

点击此按钮后，在画面上框选目标，在下方会显示选择框两个对角点在画面中的坐标。点击“发送”，软件将发送以此坐标为参数的跟踪命令。点击“命令退出”以发送退出跟踪的命令。

区域测温坐标生成：

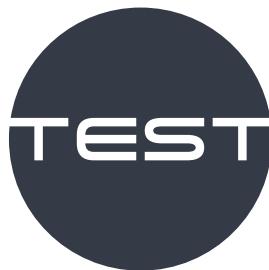

点击此按钮后，在画面上框选目标，在下方会显示选择框两个对角点在画面中的坐标。点击“发送”，软件将发送以此坐标为参数的区域测温命令。点击“命令退出”以发送关闭区域测温的命令。

URL:			播放	画中画切换			
指点点平移坐标生成	跟踪坐标生成	X0 Y0 (DEC)	Y0 Y1 (DEC)	X1 X1 (DEC)	T1 Y1 (DEC)	发送	命令退出

资源包组件	动作脚本	资源设备	0.0.5	20	4	新坐标	1	01

Values in units are raw data without units, e.g., 41.123m for carrier altitude(m) corresponds to 41.123.

The values labeled (DEC) are the decimal values converted according to the protocol, e.g., the value for the alarm temperature (DEC) is 300 for 30° C.

The values labeled (HEX) are hexadecimal data.

Analysis

The screenshot shows the GCU Assistant interface with the 'Analysis' tab selected. It displays three main panels:

- Connect Device:** Shows connection details for a device named 'Biosensor' at IP 192.168.144.108, port 2337.
- Data From Text:** A table showing raw data from a text file. The columns are Byte, Content, Original value, and Hex. Key entries include:
 - Byte 0~1: Header, Value 0x0000, Hex 00 00
 - Byte 2~3: Package Length, Value 0x0000, Hex 00 00
 - Byte 4: Version, Value 0x01, Hex 01
 - Byte 5~6: Roll control value, Value 0x0000, Hex 00 00
 - Byte 7~8: Pitch control value, Value 0x0000, Hex 00 00
 - Byte 9~10: Yaw control value, Value 0x0000, Hex 00 00
 - Byte 11: Status, with checkboxes for 'Control value valid' (unchecked) and 'Carrier's IMU valid' (checked), Value 0x01, Hex 01
 - Byte 12~13: Absolute roll angle of carrier, Value 0x0000, Hex 00 00
 - Byte 14~15: Absolute pitch angle of carrier, Value 0x0000, Hex 00 00
 - Byte 16~17: Absolute yaw angle of carrier, Value 0x0000, Hex 00 00
 - Byte 18~19: Northward acceleration of carrier, Value 0x0000, Hex 00 00
 - Byte 20~21: Eastward acceleration of carrier, Value 0x0000, Hex 00 00
 - Byte 22~23: Upward acceleration of carrier, Value 0x0000, Hex 00 00
 - Byte 24~25: Northward velocity of carrier, Value 0x0000, Hex 00 00
 - Byte 26: Eastward velocity of carrier, Value 0x0000, Hex 00 00
 - Byte 27: Upward velocity of carrier, Value 0x0000, Hex 00 00
- Data From HEX:** A table showing raw data from a hex file. The columns are Byte, Content, Original value, and Hex. Key entries include:
 - Byte 0~1: Header, Value 0x0000, Hex 00 00
 - Byte 2~3: Package Length, Value 0x0000, Hex 00 00
 - Byte 4: Version, Value 0x01, Hex 01
 - Byte 5: Td operating mode, Value 0x00, Hex 00
 - Byte 6: Td status, Value 0x00, Hex 00
 - Byte 7: Horizontal target winning, Value 0x00, Hex 00
 - Byte 10~11: Vertical target winning, Value 0x0000, Hex 00 00
 - Byte 12~13: Y-axis relative angle of carrier, Value 0x0000, Hex 00 00
 - Byte 14~15: X-axis relative angle of carrier, Value 0x0000, Hex 00 00
 - Byte 16~17: Z-axis relative angle of carrier, Value 0x0000, Hex 00 00
 - Byte 18~19: Absolute roll angle of carrier, Value 0x0000, Hex 00 00
 - Byte 20~21: Absolute pitch angle of carrier, Value 0x0000, Hex 00 00
 - Byte 22~23: Absolute yaw angle of carrier, Value 0x0000, Hex 00 00
 - Byte 24~25: X-axis absolute angular velocity of carrier, Value 0x0000, Hex 00 00
 - Byte 26~27: Y-axis absolute angular velocity of carrier, Value 0x0000, Hex 00 00
 - Byte 28~29: Z-axis absolute angular velocity of carrier, Value 0x0000, Hex 00 00

Connect Device

GCU can be connected via serial port, UDP or TCP.

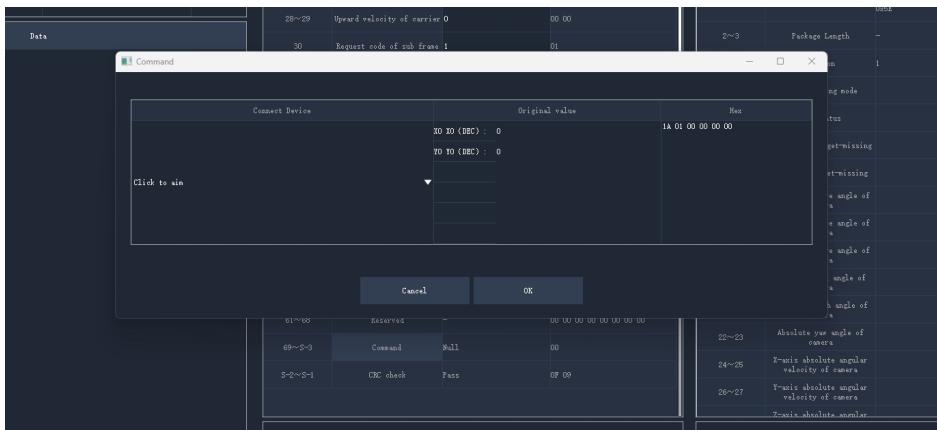

Data

Displays the packets sent and received when the software communicates with the GCU.

Data From Host

Enter the original data in the list of Data From Host, click "Command" in bytes 69~S-3 and select the desired command. Click "Create Data", the software will convert the raw data to the complete packet from host and display it in the text box below.

You can also input the complete packet from host into the text box, click "Analysis Data", and the data list will show the data parsed from the packet. Click "Send" to send the packet in the text box to GCU, and click "Null Command" to send a packet with null command to GCU.

Data From GCU

When the software receives the packet returned by the GCU, it automatically parses the data and displays it in the data list.

You can also enter the complete packet returned by the GCU in the text box below and click "Analysis Data", and the parsed data will be displayed in the data list.

Process Analysis

Continuous

Click "Start", the software will communicate with the GCU normally at 30Hz, and you can click various commands to control the pod.

Single-step

Click "Start", the software will communicate with the GCU normally at 30Hz, after sending a command and receiving the command feedback from the GCU, the software will communicate with the GCU twice more with null command packets, and then stop the communication.

Data Analysis

Click this button, the software will stop the communication with GCU, parse the highlighted group of packets (including sent and received packets) in the data display area, and display the parsing result. You can select the packets to be parsed by clicking "Previous" or "Next".

Video

Click "Video", a video playback window will pop up, and you can interact with the screen on this interface.

URL:

Enter the video stream URL of the pod and click "Play", and the window will display the real-time image of the pod.

Pic-in-pic:

Click this button to cycle through the picture-in-picture mode of the pod.

Click to aim:

After clicking this button, click the target on the screen, and the coordinates of the selected point on the screen will be displayed at the bottom. Click "Send", the software will send a click-to-aim command parameterized by these coordinates.

Spot temp:

After clicking this button, click the target on the screen, and the coordinates of the selected point on the screen will be displayed at the bottom. Click "Send", the software will send a spot-temperature-measurement command parameterized by these coordinates. Click "OFF" to send a command to turn off the spot-temperature-measurement.

Track:

After clicking this button, frame select the target on the screen, and the coordinates of the two diagonal points of the selection box on the screen will be displayed at the bottom. Click "Send", the software will send a track command parameterized by these coordinates. Click "OFF" to send a command to exit tracking.

Area temp:

After clicking this button, frame select the target on the screen, and the coordinates of the two diagonal points of the selection box on the screen will be displayed at the bottom. Click "Send", the software will send an area-temperature-measurement command parameterized by these coordinates. Click "OFF" to send a command to turn off the area-temperature-measurement.
