

铰链型号说明

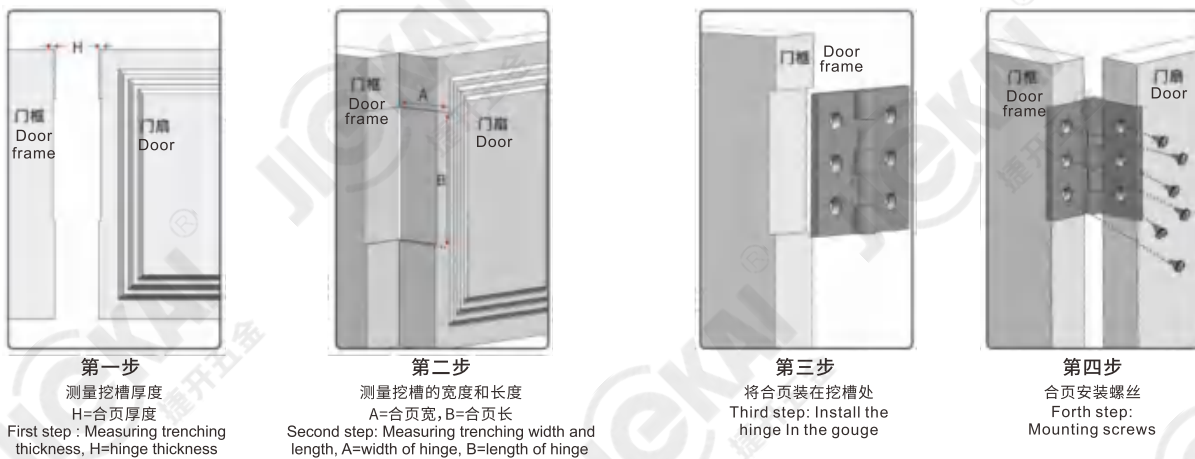

Hinge model description

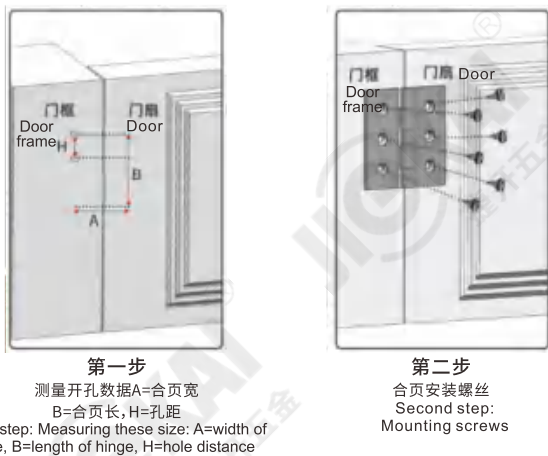

铰链安装示意图

Diagram of hinge

90° 产品安装 Degrees installation

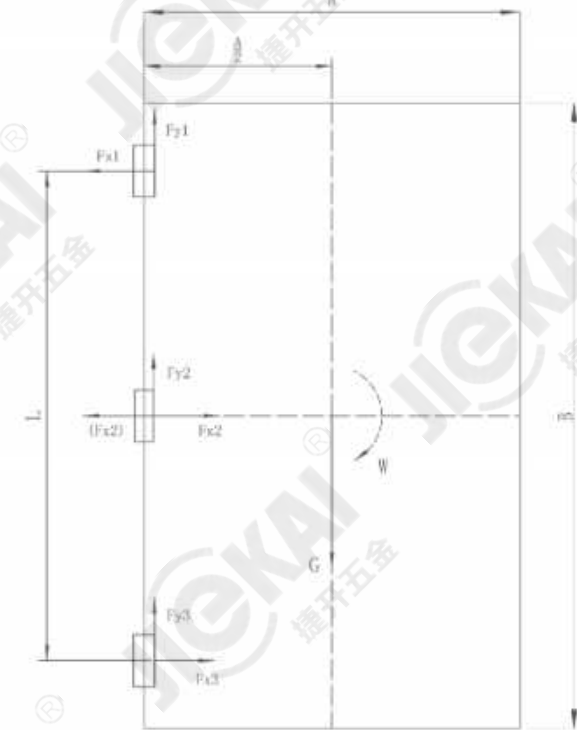

180° 产品安装 180 degrees installation

铰链计算说明

Hinge calculation explanation

铰链计算公式:

设铰链数量=n; 门宽=A; 门高=B; 门重=G; 铰链安装距离=L

轴向力值Fy分析:

$$F_y = G \cdot \frac{1}{n}$$

$$\text{即: } F_{y1} + F_{y2} + F_{y3} = G \quad F_{y1} = F_{y2} = F_{y3} = \frac{G}{n}$$

径向力值Fx分析:

如图所示, Fx2与中心门重G处于同一高度位置, 此水平方向的力不作为中央铰链F=0上;

$$\text{既: } F_{x2}=0$$

$$W = G \cdot \frac{A}{2} = L \cdot F_x$$

$$F_x = F_{x1} = F_{x3}$$

$$F_{x1} = F_{x3} = \frac{G \cdot A}{2L}$$

注: 选型时, 每一个铰链要可以支持承载门重;
在静态条件下, 选型可按样本数据;
以上为理论计算公式;

Hinge calculation formula:

Let the number of hinges = n; door width = A; door height - B; door weight - G; hinge installation distance = L

Analysis of axial force value Fy:

$$F_y = G \cdot \frac{1}{n}$$

$$\text{That is: } F_{y1} + F_{y2} + F_{y3} = G \quad F_{y1} = F_{y2} = F_{y3} = \frac{G}{n}$$

Analysis of the radial force value Fx:

As shown in the figure, Fx2 is at the same height position as the central door weight G. This horizontal force is not as the central hinge F=0 on;

$$\text{Both: } F_{x2}=0$$

$$W = G \cdot \frac{A}{2} = L \cdot F_x$$

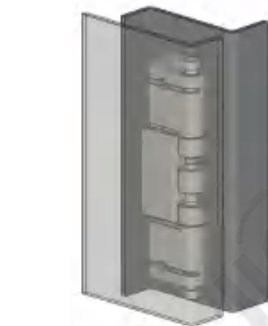

$$F_x = F_{x1} = F_{x3}$$

$$F_{x1} = F_{x3} = \frac{G \cdot A}{2L}$$

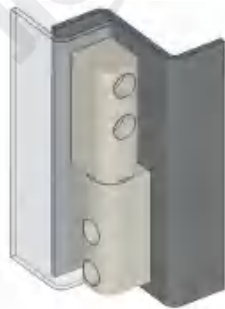

Note: When selecting the type, each hinge should be able to support the load of the door weight: under static conditions, the selection can be based on sample data;

The above is the theoretical calculation formula.
